

## NOVOFLEX Tripod Collar for Leica SL lenses

### Well-balanced assembly

The NOVOFLEX Präzisionstechnik GmbH enlarges its accessories' programme for the lenses of the mirrorless system camera Leica SL. From now on, the **tripod collar ASTAT-SL** is available for the relatively big and heavy zoom lenses Leica Vario-Elmarit-SL 2,8-4,0/24-90 mm ASPH (1,140 gram) and Leica Apo-Vario-Elmarit-SL 2,8-4,0/90-280 mm (1,710 gram).

The new tripod collar relieves the tripod thread of the camera as well as of the camera bayonet and enables a well-balanced assembly of the lenses close-by to their balance point. The tripod collar can be easily fitted, allowing a quick change from landscape to portrait format. Moreover, the collar is equipped with an ARCA-compatible dovetail as well as of 1/4" and 3/8" threaded holes. Thus, it is suitable for all compatible quick release units respectively nearly all tripods. The Leica Apo-Vario-Elmarit SL 2,8-4,0/90-280 mm is equipped with its own clamp, which – however – does not dispose of an ARCA dovetail. The standard tripod clamp can be replaced by the ASTAT-SL without any problems.

A further advantage: With the new tripod collar the camera-/lens combination handling is very persuasive and comfortable, even without using a tripod.

The tripod collar ASTAT-SL is available from now on.
