

The TrioPod loses weight

The new and unique NOVOFLEX BasicPod

At last. There's now a fantastic, light alternative to a tripod for all those hikers, mountaineers, ski mountaineers and any other photographers who need to minimize the weight of their equipment when on tour. It puts an end to the days when the classic tripod stayed in the cupboard because of its weight. The solution is so simple: two carbon trekking poles, a small ball head, one carbon tripod leg resulting in the new NOVOLFEX BasicPod. It couldn't be simpler or lighter.

Small, lightweight and extremely compact, the BasicPod tripod shoulder is ideal for the innovative and modular TrioPod tripod range. Weighing in at just 52 g, it is an incredible 260 g lighter than the standard tripod base. It is extremely stable and has a carrying capacity of up to 15 kg. It also has two fixed splay angles for the legs at 25° and 80°.

The BasicPod is supplied with three 15 cm mini macro legs, enabling immediate use as a mini tripod or a table tripod. The carbon or aluminium tripod legs in the TrioPod range are, of course, also compatible. An obvious choice for outdoor use of the BasicPod are naturally the QuadroLeg folding trekking poles. As a part in a modular system, the compact BasicPod can thus be adapted to suit individual requirements and situations. BasicPod is now the fourth tripod base in the world's most flexible tripod range.

Whether purchased as a new standard tripod base or as a supplement to an existing TrioPod system, the BasicPod is the ideal choice for all photographers who want to, or have to, reduce the weight of their equipment to an absolute minimum.

In addition two hiking pod sets for trekking tours with two carbon hiking sticks and one carbon leg, each, are available.
